# **Questions: Logarithms**

#### Zoë Gemmell

#### **Summary**

A selection of questions for the study guide on logarithms.

Before attempting these questions, it is highly recommended that you read Guide: Introduction to Logarithms.

### Q1

For the following, find the value of x, representing your answer exactly (not decimals).

- 1.1.  $\log_7(x) = 1$
- 1.2.  $\log_8(x) = 3$
- 1.3.  $\log_{12}(x) = 0$
- 1.4.  $\log_{10}(100) = x$
- 1.5.  $\log_2(64) = x$
- 1.6.  $\log_4(2) = x$
- 1.7.  $\log_3(27) = x$
- 1.8.  $\log_{10}(1) = x$
- 1.9.  $\log_x(16) = 4$
- 1.10.  $\log_x(49) = 2$
- 1.11.  $\log_x(13) = 4$
- 1.12.  $\log_{2x}(12) = -1$

## Q2

Before attempting this question, write out the five laws of logarithms next to their names: the product rule, the quotient rule, the power rule, the zero rule, the identity rule.

1

Using the five laws of logarithms, find the value of x:

$$2.1. \quad \log_3\left(\frac{1}{27}\right) = x$$

- 2.2.  $4\log_4(2) = x$
- 2.3.  $\log_5(10) + \log_5\left(\frac{5}{2}\right) = x$
- 2.4.  $3\log_7\left(a^{1/3}\right) \frac{1}{2}\log_7(a^2) = x$
- $2.5. \quad \log_x(YZ) = M$
- 2.6.  $\log_a{(y)} \log_a(x) = 11$

### Q3

Using the change of base rule and other laws of logs if required, express the following logarithms as expressions involving a logarithm to the specified base. Give your answer as simply as possible, evaluating if you can.

- 3.1.  $\log_3(25)$  to base 5
- 3.2.  $\log_8(3)$  to base 16
- 3.3.  $\log_e(10)$  to base 1000
- 3.4.  $\ln(27)$  to base 3
- 3.5.  $\log_4(8x)$  to base 2

After attempting the questions above, please click this link to find the answers.
